Walid Benhachimi

Cybersecurity Engineering Student | Application Security and DevSecOps

Rabat – Temara, Morocco · +212 644 972 403 · benhachimiwalid2@gmail.com
Portfolio: vvalidben.github.io/Portfolio-walid · GitHub: github.com/vvalidben · LinkedIn: walid-benhachimi

PROFILE

Fifth-year cybersecurity engineering student at EMSI Rabat, focused on penetration testing and web security. Hands-on experience with vulnerability assessment, offensive tools (Burp Suite, Metasploit, Nmap), security test automation (DAST) and DevSecOps deployment. Seeking a 2027 final-year internship (PFE) in penetration testing, application security or DevSecOps.

EDUCATION

Engineering Degree — Cybersecurity and Information Systems · EMSI Rabat · expected 2027 — 2022 – 2027

Baccalaureate in Physical and Chemical Sciences · Al-Ghazali High School, Temara — 2022

PROFESSIONAL EXPERIENCE

Yiwu Sealand Import Export — Internship: automated XSS vulnerability detection — July – September 2026

- Designed a DAST framework for XSS detection, driven from a FastAPI web interface (scans, tracking, history).
- Orchestrated a Playwright crawler and the XSStrike/DalFox scanners in isolated Docker containers.
- Validated the tool on an authorized target (OWASP Juice Shop); HTML and PDF reports generated automatically.

Stack: Python, FastAPI, Playwright, XSStrike, DalFox, Docker, Jinja2, ReportLab

YZY Digital Technologies — Summer internship: cloud deployment and DevSecOps — July – September 2025

- Containerized an application with Docker for deployment on AWS.
- Deployed the application on Kubernetes with AWS Fargate (serverless), following DevSecOps practices.

Stack: Docker, Kubernetes, AWS Fargate

CYBERSECURITY PROJECTS

Systems Monitoring Architecture — Academic project (PFA), year 4 — 2025 – 2026

- Set up monitoring with Node Exporter, Prometheus and Grafana (memory, network, disk) as part of a defensive approach.

Phishing Simulation Lab — Academic project, year 4 · HTML, JavaScript, Docker — 2025 – 2026

- Built a replicated login page for an authorized, educational phishing-awareness exercise.

CERTIFICATIONS AND TRAINING

Oracle Cloud Infrastructure Certified Foundations Associate — Oracle · professional certification — September 2026
Verified certification · issued September 9, 2026, valid until September 9, 2028

Foundations of Cybersecurity — Google · online course certificate (Coursera) — October 2026

Ethical Hacker — Cisco Networking Academy · course — In progress

Administration Linux avec Red Hat RH124 — Honoris · online course certificate (Coursera) — May 2026

Python for Data Science, AI & Development — IBM · online course certificate (Coursera) — November 2025

The Unix Workbench — Johns Hopkins University · online course certificate (Coursera) — December 2024

ACTIVITIES

KASBAH Exercise — cyber-crisis serious game, EMSI and CyberSup · participation certificate — September 23–25, 2026

- Took part in a 3-day crisis simulation (Cell 3, Business Continuity unit): assess, decide and act under pressure.

TECHNICAL SKILLS AND LANGUAGES

- **Application security:** web penetration testing, vulnerability assessment, OWASP, XSS detection (DAST)
- **Penetration testing:** Burp Suite, OWASP ZAP, Metasploit, sqlmap, Nmap, Nikto, Gobuster/ffuf, Hydra, John/Hashcat
- **Analysis and automation:** Wireshark, XSStrike, DalFox, Playwright
- **Training:** PortSwigger Web Security Academy (in progress)
- **Systems and monitoring:** Kali Linux, Linux, Prometheus, Grafana, network security, system hardening
- **Cloud and DevSecOps:** Docker, Kubernetes, AWS Fargate, GitHub Actions/GitLab CI, SonarQube, Git
- **Development:** Python (FastAPI, Django), JavaScript (React, Node.js)
- **Languages:** Arabic (native), French (B2), English (B2)
