## PROFILE

Fifth-year engineering student at the Moroccan School of Engineering Sciences (EMSI) in Rabat, seeking a final-year internship (PFE) in cybersecurity.

## EDUCATION

**Engineering Degree — Cybersecurity and Information Systems** · EMSI Rabat · expected 2027 — 2022 – 2027

**Baccalaureate in Physical and Chemical Sciences** · Al-Ghazali High School, Temara — 2022

## PROFESSIONAL EXPERIENCE

**Yiwu Sealand Import Export** — Internship: automated XSS vulnerability detection — July – September 2026

- Designed a DAST framework for XSS detection, driven from a FastAPI web interface (scans, tracking, history).
- Orchestrated a Playwright crawler and the XSStrike/DalFox scanners in isolated Docker containers.
- Validated the tool on an authorized target (OWASP Juice Shop); HTML and PDF reports generated automatically.

**Stack:** Python, FastAPI, Playwright, XSStrike, DalFox, Docker, Jinja2, ReportLab

**YZY Digital Technologies** — Summer internship: cloud deployment and DevOps — July – September 2025

- Containerized the application with Docker for cloud deployment on AWS.
- Deployed and orchestrated the containers on Kubernetes (AWS Fargate).

**Stack:** Docker, Kubernetes, AWS Fargate

## CYBERSECURITY PROJECTS

**Hybrid ML + regex Web Application Firewall (WAF)** — Personal project — 2026

- Built a hybrid WAF covering the OWASP Top 10 (SQL, XSS, command injection, SSRF, known exploits…): an OpenResty (NGINX/Lua) reverse proxy combining high-precision per-category signatures with a Random Forest model (character n-gram TF-IDF) served via ONNX Runtime.
- Hardened with automatic IP bans, a verdict cache, circuit breaker and fail-open budget; Grafana/Loki SIEM (GeoIP threat map) and n8n incident-response automation.

**Systems Monitoring Architecture** — Academic project (PFA), year 4 — 2025 – 2026

- Set up monitoring with Node Exporter, Prometheus and Grafana (memory, network, disk) as part of a defensive approach.

**Phishing Simulation Lab** — Academic project, year 4 · GoPhish, Mailpit, Docker — 2025 – 2026

- Built a replicated login page and an awareness campaign for an authorized, educational phishing exercise.

## CERTIFICATIONS AND TRAINING

**Oracle Cloud Infrastructure Certified Foundations Associate** — Oracle · professional certification — September 2026

**Ethical Hacker** — Cisco Networking Academy · certification — October 2026

**Foundations of Cybersecurity** — Google · online course certificate (Coursera) — October 2026

**Administration Linux avec Red Hat RH124** — Honoris · online course certificate (Coursera) — May 2026

## ACTIVITIES

**KASBAH Exercise** — cyber-crisis serious game, EMSI and CyberSup · participation certificate — September 23–25, 2026

- Took part in a 3-day crisis simulation (Cell 3, Business Continuity unit): assess, decide and act under pressure.

## TECHNICAL SKILLS AND LANGUAGES

- **Application security:** web penetration testing, vulnerability assessment, OWASP, XSS detection (DAST)
- **Penetration testing:** Burp Suite, OWASP ZAP, Metasploit, sqlmap, Nmap, Nikto, Gobuster/ffuf, Hydra, John/Hashcat
- **Tooling and training:** XSStrike, DalFox, Playwright · TryHackMe, PortSwigger Web Security Academy (in progress)
- **Systems and monitoring:** Kali Linux, Prometheus, Grafana, WireGuard, Wireshark, hardening
- **Cloud and DevSecOps:** Docker, Kubernetes, AWS Fargate, Ansible, Jenkins, SonarQube, GitLab/GitHub CI
- **Development:** Python (FastAPI, Django), JavaScript (React, Node.js)
- **Languages:** Arabic (native), French (B2), English (B2)
