PROFILE

Fifth-year cybersecurity engineering student at EMSI Rabat, focused on penetration testing and web security. Experience in vulnerability assessment, offensive tooling, security test automation (DAST) and DevSecOps deployment. Seeking a 2027 final-year internship (PFE) in penetration testing, application security or DevSecOps.

EDUCATION

Engineering Degree — Cybersecurity and Information Systems · EMSI Rabat · expected 2027 — 2022 – 2027

Baccalaureate in Physical and Chemical Sciences · Al-Ghazali High School, Temara — 2022

PROFESSIONAL EXPERIENCE

Yiwu Sealand Import Export — Internship: automated XSS vulnerability detection — July – September 2026

- Designed a DAST framework for XSS detection, driven from a FastAPI web interface (scans, tracking, history).
- Orchestrated a Playwright crawler and the XSStrike/DalFox scanners in isolated Docker containers.
- Validated the tool on an authorized target (OWASP Juice Shop); HTML and PDF reports generated automatically.

Stack: Python, FastAPI, Playwright, XSStrike, DalFox, Docker, Jinja2, ReportLab

YZY Digital Technologies — Summer internship: cloud deployment and DevSecOps — July – September 2025

- Containerized the application (Docker) and automated provisioning with Ansible for AWS deployment.
- Deployed on Kubernetes (AWS Fargate) through a Jenkins CI/CD pipeline, with SonarQube code analysis.

Stack: Docker, Kubernetes, AWS Fargate, Ansible, Jenkins, SonarQube

CYBERSECURITY PROJECTS

Hybrid ML + regex Web Application Firewall (WAF) — Personal project — 2026

- Built a SQL-injection WAF: an OpenResty (NGINX/Lua) reverse proxy combining high-precision signatures with a Random Forest model (character n-gram TF-IDF) served via ONNX Runtime.
- Hardened for production with a verdict cache, circuit breaker and per-client fail-open budget; Grafana/Loki SIEM monitoring with a GeoIP threat map and n8n incident-response automation.

Systems Monitoring Architecture — Academic project (PFA), year 4 — 2025 – 2026

- Set up monitoring with Node Exporter, Prometheus and Grafana (memory, network, disk) as part of a defensive approach.

Phishing Simulation Lab — Academic project, year 4 · GoPhish, Mailpit, Docker — 2025 – 2026

- Built a replicated login page and an awareness campaign for an authorized, educational phishing exercise.

CERTIFICATIONS AND TRAINING

Oracle Cloud Infrastructure Certified Foundations Associate — Oracle · professional certification — September 2026

Ethical Hacker — Cisco Networking Academy · course certificate — October 2026

Foundations of Cybersecurity — Google · online course certificate (Coursera) — October 2026

Administration Linux avec Red Hat RH124 — Honoris · online course certificate (Coursera) — May 2026

ACTIVITIES

KASBAH Exercise — cyber-crisis serious game, EMSI and CyberSup · participation certificate — September 23–25, 2026

- Took part in a 3-day crisis simulation (Cell 3, Business Continuity unit): assess, decide and act under pressure.

TECHNICAL SKILLS AND LANGUAGES

- **Application security:** web penetration testing, vulnerability assessment, OWASP, XSS detection (DAST)
- **Penetration testing:** Burp Suite, OWASP ZAP, Metasploit, sqlmap, Nmap, Nikto, Gobuster/ffuf, Hydra, John/Hashcat
- **Tooling and training:** XSStrike, DalFox, Playwright · TryHackMe, PortSwigger Web Security Academy (in progress)
- **Systems and monitoring:** Kali Linux, Prometheus, Grafana, WireGuard, Wireshark, hardening
- **Cloud and DevSecOps:** Docker, Kubernetes, AWS Fargate, Ansible, Jenkins, SonarQube, GitLab/GitHub CI
- **Development:** Python (FastAPI, Django), JavaScript (React, Node.js)
- **Languages:** Arabic (native), French (B2), English (B2)
